

## **Chapter 1: QlikView Fundamentals 1**

- QlikView components 2
- QlikView installation 2
- Getting started 4
- The development life cycle of QlikView implementations 5
- Summary 9

## **Chapter 2: Extract, Transform, and Load 11**

- Configuring settings 12
- Scripting essentials 12
- Connecting to the database 14
  - Loading the OrderHeader Table 15
  - Loading the OrderDetail table 18
  - Creating fields in the Order table 19
  - Loading the Customer table 21
  - Loading the Product table 21
  - Resolving the synthetic keys 22
    - How to resolve synthetic keys 23
  - Removing synthetic keys between the Product and Order Detail tables 23
  - Loading the ProductSubcategory table 24
  - Loading data from text and Excel files 24
  - Loading the Product Category table 24
  - Loading Employee.xlsx 26
  - Circular reference and loosely coupled tables 28
    - Circular reference 28
    - Loosely coupled tables 28
    - Resolving circular reference 29
  - Loading the SalesTerritory and Shipment tables 30
  - Loading an Inline table 31
  - The Qualify statement 32
  - Loading the Shippers table 33
  - A word about resident load and Exists 34
  - Finding the sales person 34
  - Using If statements in the script 35
  - Including files using the Include statement 36
  - More on Table Viewer 36
  - Time to review your data model so far 38
- Summary 38

## **Chapter 3: Optimizing Your Data Model 39**

- Mapping table essentials 40
- Mapping load – Territory table 41
  - Mapping load – Product Category and ProductSubcategory tables 43
  - Mapping load – ProductSubcategory table 44
  - Mapping load – CountryRegion\_Inline 45
- Concatenation 46
  - Concatenation example 47
    - Automatic Concatenation 47
    - NoConcatenate 48
    - Forced concatenation 48
- Joins 49
  - Join Orders and Order Detail 49
  - Left join SalesPerson 50

- Aggregating data 51
- Concatenating the new Employees table 51
- Reviewing the final data model 53
- Summary 53

## **Chapter 4: Data Modeling Challenges 55**

- Crosstable essentials 56
- Loading EmployeeSalesTarget.xlsx 57
- Link table 59
  - Link table essentials 59
  - Creating a link table 60
- Variables in QlikView 63
  - Using variables to set the file path 64
- Master calendar 64
- The IntervalMatch function 67
- QlikView Data Files (QVD) 70
  - Creating QVD files for our data model 70
- Optimized load – reading QVD 72
  - Reading QVD files 73
- Best practices of data modeling 74
- Summary 76

## **Chapter 5: Creating Dashboards 77**

### **Dashboarding essentials 77**

- Getting started 79
  - Associative experience 79
  - Binary load 80
    - Exploring menu items 80
- Sheet objects 82
- Creating a multi-tab application 84
  - The dashboard sheet 86
  - Creating list boxes for other fields 88
    - Options to copy and paste objects 90
    - Placing a logo on the dashboard sheet 91
- Creating a bar chart 92
  - Expression Overview 95
- Creating a text object 95
- Creating a scatter chart 97
- The story of two tables 101
  - Creating a straight table 101
  - Enhancing your tables 102
    - Groups 104
      - Creating a drill-down group 104
      - Creating a cyclic group 105
    - Creating a pivot table 105
- Dimension limits 107
  - Interactivity using text objects 110
- Some more charts 111
  - Line charts 111
  - Combo charts 111
  - Pie charts 112
- Some important functions 113
  - The Aggr function 113
  - Nested aggregation 113

Other functions 115

Summary 116

## **Chapter 6: Comparative Analysis 117**

Set Analysis essentials 117

Using Set Analysis 119

Alternate States 120

What-If Analysis 122

Using input box 124

The last step 125

Summary 126

## **Chapter 7: Securing Your Application 127**

Section Access essentials 127

Implementing Section Access 130

Using OMIT 131

Using reduction 132

Summary 133

## **Chapter 8: Application Deployment 135**

QlikView architecture essentials 136

Client Access Licenses (CALs) 137

QlikView application deployment 138

QlikView server structure 139

Summary 139
